

When preparing for the treatment of **Cockroaches** by Gath's Pest Patrol please abide by the following instructions **BEFORE** the technician's arrival

- **Kitchen Area:** remove all items from the cabinets and drawers. Remove items from under the sink too; cleaning products, trash can etc. Please remove all the dishes in the cabinets and make sure there are no pests hiding in them. Once all the items are removed from the cabinets and drawers, all contents may be placed in the center of the living room or dining room. (Please leave the actual drawers in their place). Discard any loose food particles from these areas as well. If you'd like to clean your cabinets do so **before** the treatment. Take all food out of the cabinets such as; canned goods, boxed goods, etc. All items that have been taken from these areas should be inspected for signs of activity, and thrown away if necessary. The rest can then be covered with a sheet or plastic.
- **Bathroom Area:** Much the same as the kitchen area, please remove all items from the counters, medicine cabinets, and under the sink; cosmetics, toothbrushes, medications, toiletries, etc. The counters and plumbing access should be accessible to the technician for successful treatment of your home. All items taken from this area may be placed in a different room and covered with a sheet or with plastic (or placed in the bathtub)
- **If you have pets,** clear their food, food bowls, and toys from the area and cover. If you have fish, cover their tank with a damp towel and turn off air pumps. If you have salt water fish please contact your local pet store for additional steps, saltwater fish are more sensitive to disruptions in their environment. Birds are required to be out of the home for up to 8 hours.
- **If you have children** please remove their toys and place in plastic bags to avoid contact with product.
- **All residents of the home are required to be off the premises for at least 3 hours.** Children under the age of two should be out of the home for up to 5 hours. People with bad health; respiratory problems, heart problems, or pregnancy should be out for 4-5 hours.
- **Please make note:** activity after treatment can be seen for up to 21 days and is common. In heavily infested environments, additional treatments may be needed at the 3 week mark. Do not clean cabinets right away. Please wait at least 30 days. Cleaning these areas will dampen the effectiveness of the product, resulting in unsuccessful eradication of your roaches. All belongings can be put away as long as the surfaces are completely dry.
